DM-1 Project proposal for design database system for solar system company

Company selection:

SENNON ENERGY SOLUTION (PVT) LTD

Overview

Design and create a Database system for a solar system company with modern design principles.

Goles

- ❖ Restructure the system's current implementation
- ❖ Effective data storing and access to and from the system
- ❖ Create system and data ready for implement software application
- ❖ Secured system with proper backups and access control

Milestones

1. Analyze necessary requirements
2. Create EER diagram
3. Create schema diagram
4. Create physical database (SQL Server)
5. Test and implement the system

Entities and relations analysis

1. Person - hold common attributes for Customer, Supplier and Employee
2. Customer - customers
3. Supplier - system supplier
4. Employee - hold common attributes for Employers
5. Driver - drivers of the company
6. Engineer - Engineers of the company
7. Technician - technicians of the company
8. System - the entire solar system
9. Installment - the installing process of the system
10. Vehicle - physical vehicles
11. Activity - story activity generated by the system
12. Dependant - dependants of the employee
